## Neta Scientific Names Edgar James III President, Charting a Growth-Forward Path

---

*James brings global procurement leadership and a people-first approach to expand Neta's reach, deepen customer partnerships, and build a broader international footprint.*

Edgar James III  
President, Neta Scientific

**MARLTON, N.J.** — Neta Scientific has named Edgar James III as President, effective January 1, 2026. James, who joined the company in 2025 as President-Elect, brings 15 years of global procurement leadership across three Fortune 500 companies—and a vision rooted in the same five principles that have defined Neta since its founding: integrity, mutual respect, flexibility, social responsibility, and innovation.

For James, the role is more than a career milestone. “I came to Neta because I wanted to help build something that matters beyond the balance sheet,” he says. “Neta’s legacy—honoring Dr. Winfred and Garnetta Sanders—was a big part of what drew me in. I’ve always looked for workplaces where the products and services we deliver touch people’s daily lives, and Neta is uniquely positioned to do that across Life Sciences, Academia, Food and Beverage, and more.”

As President, James is focused on a strategy that pairs rigorous operational excellence with accelerated growth. He envisions Neta as best-in-class not only in the breadth of its portfolio, but in how it serves customers—matching speed with accuracy, negotiating to deliver lasting value, and applying innovative approaches to diagnose supply chain challenges before they become problems.

“We’re a small business competing with giants,” James notes, “and that makes our culture and our people even more essential. Our value proposition starts with our team. I’ve been a customer of Neta, so I know what it feels like to have a partner who delivers accuracy, speed, and sustained value. We’re building a workforce that demands excellence and has the resources to deliver it—quietly, consistently, and confidently.”

On the horizon: a robust growth pipeline, supply chain consolidation, enhanced procurement support for R&D and manufacturing, and international expansion through Neta Europe—along with M&A opportunities to broaden the company’s global footprint. “The future isn’t a distant horizon,” James says. “It’s right in front of us—ready for acceleration and value creation for our customers, and ready for our employees to thrive.”

---

***“This feels like a dream realized, not just a job. Neta’s people and principles give me confidence that we can build enduring partnerships and redefine what’s possible in scientific supply.”***
